

Ball mill spare parts

Ball mill spare parts primarily consist of six parts, viz, the barrel, feeding part, discharging part, bearing part and lubrication system. The lining plate is installed inside the barrel, whose materials are from manganese steel, carbon steel, alloy steel. There's a hole in the barrel for the use of maintenance and changing of the liner.

Ball Mill Features

1. Large application range, simple structure and convenient maintenance;

2. Large capacity and continuous work are very obvious;
3. Barrel lining and grinding media can apply various abrasive materials;
4. Installation and adjustment are very convenient and easy to be operated.

Ball mill spare parts manufacturer

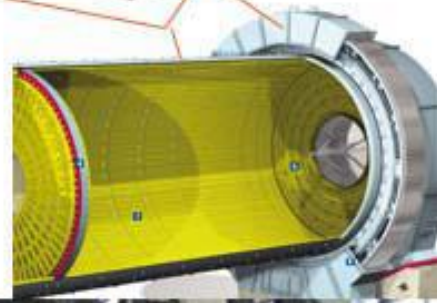

As a professional ball mill manufacturer in Great Wall Steel Casting Company has 60 years of production experience, advanced ball mill technology, strong technical, reasonable ball mill price, welcome consumers to visit consultation. The ball mill is a key equipment for grinding the crushed materials, and the ball mill is widely used in powder-making production line including cement, silicate, new-type building material, refractory material, fertilizer, ore dressing of ferrous metal and non-ferrous metal, glass ceramics, etc. And the ball mill can grind various ores and other materials with dry type and wet type. There are two kinds of ball mill, grate type and overfall type due to different ways of discharging material. Our ball mills can satisfy different requirements, and have good features such as low consumption, high capacity per hour, no pollution to the environment.

around, easy to be repaired. We have the good service to our customers, if they can't install the machines, we can send our technician come to your location, and install for you. We make every endeavor to satisfy our customers.

We can supply:

- 1.Gear Ring
- 2.Feed Inlet, Discharge End
- 3.Mill Head, Hollow Shaft
- 4.Steel Cylindrical Shell
